SUMMARY

Results-driven Senior Software Engineer with 4+ years of experience building production-grade AI systems. Currently designing and deploying Generative AI solutions including multi-agent orchestration, conversational AI, and RAG pipelines at enterprise scale. Deep hands-on expertise with Google Vertex AI, LangChain, OpenAI APIs, and Google Agent Development Kit (ADK). Proven ability to architect full-stack applications spanning Python, .NET, Angular, and cloud platforms (GCP, Azure). Passionate community contributor as a tech speaker, hackathon judge, and AI/ML mentor.

EXPERIENCE

Softway, Senior Software Engineer (Gen AI – Python)

May 2025 - Present

Architect and deliver enterprise Generative AI solutions using Google Vertex AI SDK, LangChain, and Google Agent Development Kit (ADK) for multi-agent systems. Design conversational AI agents with advanced memory, tool-use, and retrieval-augmented generation (RAG) capabilities for complex business workflows. Build and maintain AI observability and evaluation frameworks to monitor model performance, latency, cost, and response quality in production. Lead prompt engineering strategy across teams, optimizing LLM outputs for accuracy, safety, and domain-specific tasks. Collaborate cross-functionally with product, design, and data teams to translate business requirements into scalable AI architectures.

Liven (Abacus), Software Engineer

May 2024 - May 2025

Built data pipelines and analytics dashboards with Python and Azure, enabling real-time decision-making for restaurant and retail partners. Developed and maintained .NET microservices with ServiceStack, processing high-throughput transactions across the payment ecosystem. Integrated third-party APIs (Xero, PayPal) for automated invoicing and financial reconciliation, reducing manual processing by 40%. Contributed to Angular-based merchant portal with responsive UI components and real-time data visualization.

Kovai.co (Churn360, Document360), Software Engineer

May 2023 - May 2024

Collaborated with the team to bring Gen AI to life, using prompt engineering and the LangChain framework in Python. This boosted our product's capabilities, making it more user-friendly, innovative and AI-powered SAAS product in the market. Migrated in-process function app to isolated setup, boosting performance and reducing dependencies. Enhanced manageability and control over deployment resulted in streamlined operations. Integrated Segment.io with Churn360, facilitating smooth data flow for analysis.

Kovai.co (churn360), Junior Software Engineer

Jul 2022 - May 2023

Designed and developed a built-in usage analytics tool(Data Exchange / ETL (Extract, Transform, Load)). Utilized es-build, TypeScript, Azure function apps, and a Chrome extension for implementation. Implemented comprehensive tracking of user behavior. Resulted in notable profit increases through optimized user engagement strategies. Designed and implemented automated unit testing strategies to ensure software reliability. Contributed to the overall improvement of the user experience. Helped the customer adopt the usage tool by providing support with a sample application tailored to their application build framework during the customer onboarding phase, facilitating seamless integration with Churn360 for ongoing monitoring and evaluation of user activity.

Transbotation, Software Intern

Jan 2022 - Jun 2022

Utilized image processing techniques to extract relevant data from bill images and convert it into structured CSV format. Employed Natural Language Processing (NLP) algorithms to parse and interpret textual information from the bill images, enhancing accuracy and efficiency in data extraction. Developed a RESTful API to facilitate seamless integration between the frontend and backend systems, enabling efficient data retrieval and communication between different components of the system. Implemented robust error handling and validation mechanisms within the API to ensure data integrity and reliability in data transmission.

EDUCATION

Sri Krishna Arts and Science College, Coimbatore

LICENSES & CERTIFICATIONS

Google Cloud Certified – Essential Google Cloud Infrastructure: Core Services

SKILLS

Generative AI & LLMs • Multi-Agent Orchestration • RAG Pipelines • Prompt Engineering • Google Vertex AI SDK • LangChain / LangGraph • OpenAI APIs / Gemini • Google ADK • AI Observability & Eval • Python / FastAPI / Flask

HONORS & AWARDS

LOVE x AI

Bengaluru Innovation Challenge •
